

LAMAR Truck Body is one of the leaders of the Polish market of bodywork for light commercial vehicles up to 3,5 t and above. Our Team is composed of nearly 300 workers located in 2 production plants.

In 2014, we presented an innovative **LAMBOX**-type body - created from „sandwich” panels that provide exceptional rigidity and thermal insulation. The body, thanks to the laminate elements, was characterized by exceptional aerodynamic properties. In 2018, at the IAA in Hannover, we presented the 2nd generation LAMBOX, and in 2021, the first LAMBOX body on an electric vehicle chassis.

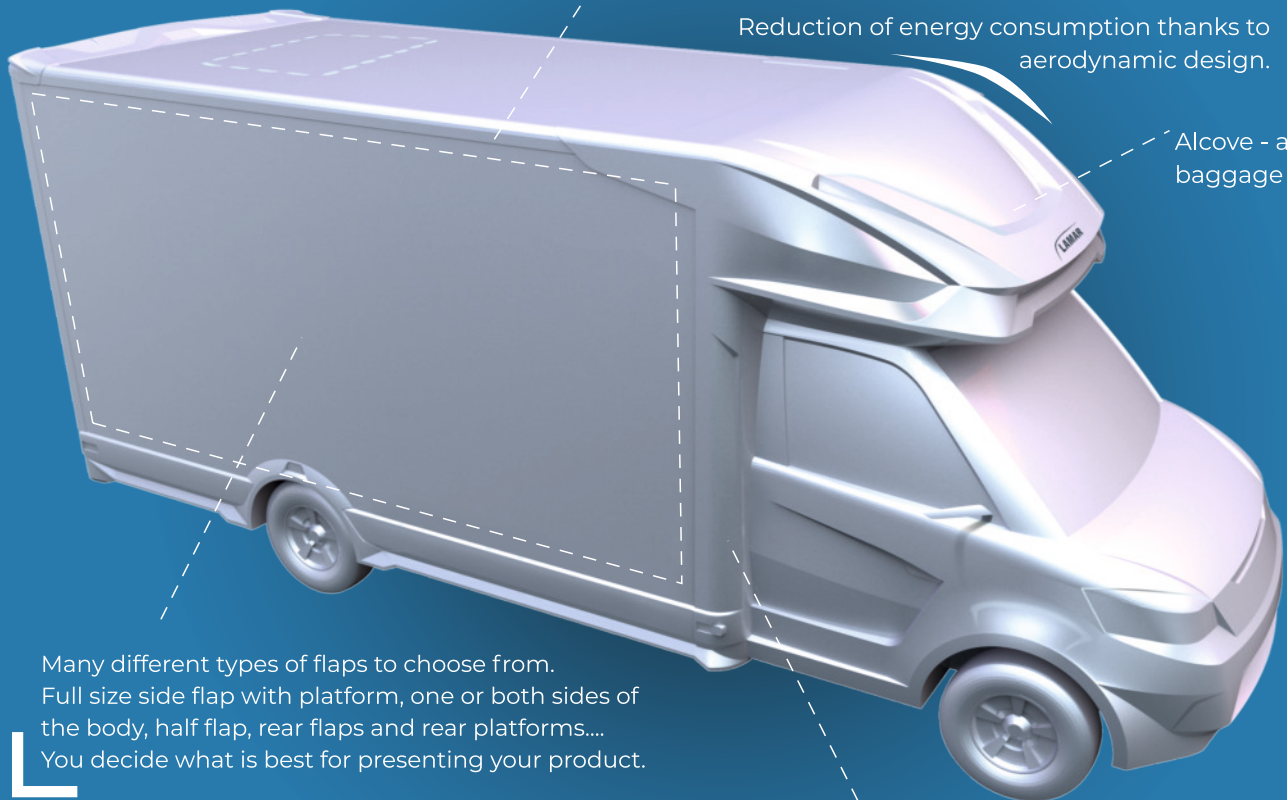

LAMAR LAMBOX

unique exterior design

Wall bonding and construction with DIN 2304 standard is the most comparable to welding technology and offers the possibility of using a uniform composite material to reduce body weight.

Reduction of energy consumption thanks to aerodynamic design.

Alcove - additional baggage space

Many different types of flaps to choose from. Full size side flap with platform, one or both sides of the body, half flap, rear flaps and rear platforms.... You decide what is best for presenting your product.

All external seals are UV-resistant, providing many years of proven quality in case of water leaks.

Possibility of any arrangement of the side wall, which can also be opened as a flap. Shelves, cabinets, displays... You can hang a TV on the side wall, or order full-size windows.

The interior can be equipped with air conditioning and parking heaters.

The rear wall can be a flap with a platform, a rear door, or be arranged as desired.

Option with a ramp for the disabled.

**Build your
own
LAMBOX.**

Available on chassis of different brands of cars. Also electric!

We are trusted by the best.

LAMBOX is a vehicle that will work well at trade shows, events, concerts... anywhere you want to go with your product. With its striking appearance and wide range of options, it is ideal for promoting modern, green technologies.
